

The challenge /

Improving productivity and driving down head count.

Templine introduced to site in order to create competition with two existing suppliers that have been on site for years.

Templine's National Implementation Team arrives on site and learns the ambient AMT pick operation. Templine promises the client an increase in productivity rates in return for a greater share of the account.

Templine productivity stats prove better than both the other agencies (see below).

Current status	On site – lead supplier
Size	700,000 sq ft
Product range	Composite
Output (cases per week)	2 Million
Pick method	Fresh = auto Ambient = AMT
Peak temp numbers (per day)	140

The result /

One supplier due to be removed. **Templine** are now the main supplier. Temp headcount is reduced due to higher productivity. The client saves considerable costs on agency spend.
